Wireless Analogue Output Receiver Module

Introduction

The T24-AO1 Receiver converts data from a T24 wireless transmitter module into an analogue output and forms part of the T24 modular telemetry system. Data from any of the T24 range of transmitters can be used.

The data sent by transmitter modules can be utilised by multiple receivers such as displays, handheld readers, analogue outputs, relay modules and computer interfaces. Receivers support common industrial power supplies and are available in robust IP rated enclosures with internal antennas optimised to give outstanding coverage.

The T24-AO1 offers, as standard, a user choice of analogue outputs; 0-10 V, 4-20 mA, 0-20 mA, ± 10 V, ± 5 V. A choice of a desktop enclosure or an IP67 sealed enclosure allows selection of a module to suit your individual application. The T24 Toolkit offers a fast and simple way to configure the analogue output scaled from any engineering unit input.

Product Features

- Provide analogue output for T24 acquisition modules
- One to one transmission up to 2000 updates per second (dependant on acquisition module)
- Industrial & desktop versions available
